Hormonal Control of Osmoregulation & Excretion. 1. Osmoregulation. Balancing Uptake & Loss of Water, Solutes.

Osmoregulation is the process of balancing the uptake and loss of water as well maintaining solute concentrations within acceptable levels:

- the key factor in this balance is osmosis, the diffusion of water from high to low concentration across a semi-permeable membrane.

Concept 44.1: Osmoregulation balances the uptake and loss of water and solutes

- Osmoregulation is based largely on controlled movement of solutes between internal fluids and the external environment
