Over 2000 years ago in ancient Egypt, the expansion of heated air was used to set temple doors in motion. The hot air engine patented in 1816 by Robert Stirling is based on a similar principle: A burner filled with fuel heats the air inside a cylinder and thereby purveys energy to the motor that activates through piecing of the flywheels.

Apart from Stirling's original engine, an important early Beta engine is Lehmann's machine on which Gustav Schmidt did the first reasonable analysis of Stirling engines in 1871. Andy Ross built a small working replica of the Lehmann machine , as well as a model air engine , both based on single cylinder Beta configurations.
